

Creating New Variables

SLU DSS 7: Data Wrangling in R
February 6, 2019

Find Seminar Resources at:
<https://github.com/slu-dss>

The repository for this week is called [wrangling-02](#). To get started, head to the url above, find the repository, and open it. Scroll down the page to the README file, and copy and paste both code snippets into RStudio's console. Execute one at a time, beginning with the package installation code. When you execute the second code chunk, have the data moved to your Desktop and feel free to delete the .zip file (it will ask if you want to do these things).

Agenda for Seminar 02:

- Reading data into R (recap)
- Exploring Data
- Creating New Variables
- Parsing Strings
- Writing Data

Extra resources: We'll post links to some extra resources for getting started with functions in the [README.md](#) file in this week's repository.

Next date: Wednesday, February 20th (1pm to 2pm)
